Quarto-Jupyter-Matlab-Everything guide

Me

Invalid Date

Here's some heading

1. Here's the first point of some listing
2. And this is the second point of this pointless listing

After this, there is some text with funny words. With a "/" or two spaces you can create a line break, as seen here.
Then the text continues in the next line.

- some bulletpoint
- more bulletpoints

```python
# This is a cell for some calculations or plot or something, it's just plain python
import numpy as np
import matplotlib.pyplot as plt

f = np.linspace(0,1,1000)
t = 10
x = np.cos(2*np.pi*f*t)

plt.close('all')
plt.figure(1)
plt.plot(f,x)
plt.grid()
```

Then, by pressing Crtl+Shift+K (just as in a default quarto document) you can create a basic quarto output. It depicts everything from Text to code to figures
