Quarto-Jupyter-Matlab-Everything guide

Me

2024-12-18

Here's some heading

1. Here's the first point of some listing
2. And this is the second point of this pointless listing

After this, there is some text with funny words. With a backslash or two spaces you can create
a line break, as seen here.
Then the text continues in the next line.

- some bulletpoint
- more bulletpoints

    - funny indented bullet point

```python
# This is a cell for some calculations or plot or something, it's just plain python
import numpy as np
import matplotlib.pyplot as plt

f = np.linspace(0,1,1000)
x = np.sin(2*np.pi*f)

plt.close('all')
plt.figure(1)
plt.plot(f,x)
plt.title('Some sine function')
plt.xlabel('Time')
plt.ylabel('Amplitude')
plt.grid()
```
